## Newton's Second Law: F=ma

## Problem

1. You push with 10.0 N on a $5.0-\mathrm{kg}$ block and there are no opposing forces. How fast will the block accelerate?
2. You push with 27 N on a $10-\mathrm{kg}$ chest, and there is a $7-\mathrm{N}$ force of friction. How fast will the chest accelerate?
3. A $400,000-\mathrm{kg}$ airplane in takeoff uses the $40,000 \mathrm{~N}$ thrust of each one of its four engines. What is the acceleration of the plane during takeoff?
4. An unbalanced force of 30 N gives an object an acceleration of $6.0 \mathrm{~m} / \mathrm{s}^{2}$. What force would be needed to give it an acceleration of $1.0 \mathrm{~m} / \mathrm{s}^{2}$ ?
5. A certain unbalanced force gives a $20-\mathrm{kg}$ object an acceleration of $2.0 \mathrm{~m} / \mathrm{s}^{2}$. What acceleration would the same force give a $30-\mathrm{kg}$ object?
6. A net force of 1.0 N acts on a $4.0-\mathrm{kg}$ object, initially at rest, for 4.0 seconds. What is the distance the object moves during that time?
7. When air resistance on a falling skydiver builds up to 0.3 the weight of the skydiver, what is the acceleration of the skydiver?
8. Suppose that you exert 300 N horizontally on a $50-\mathrm{kg}$ crate on a factory floor, where friction between the crate and the floor is 100 N . What is the acceleration of the crate?
9. A $20-\mathrm{kg}$ block of cement is pulled upward (not sideways!) with a force of 400 N . What is the acceleration of the block?
10. Bronco the skydiver, whose mass is 80 kg experiences 200 N of air resistance. What is the acceleration of his fall?
